

Specialist Infrastructure

Glenrothes presents a unique offering of an Energy Network and ultra fast broadband. Queensway Technology and Business Park Industrial Units and Plots have the potential to connect into the proposed Glenrothes Energy Network and ultra-fast broadband facilities.

Proposed Glenrothes Energy Network

The proposed Glenrothes Energy Network comprises of a network of insulated pipes delivering heat from the RWE Biomass Plant to public, private and domestic customers in Glenrothes town centre, in the form of hot water, produced by burning locally sourced wood and a small percentage of virgin wood, from the CHP plant.

Data Centre

Queensway Park Data Centres Ltd are developing one of the world's most efficient green data storage facilities, with power drawn directly from Markinch CHP. In addition to state of the art data halls, this carbon neutral facility will also feature Grade A office accommodation with security centre, client space, test and build rooms and a facilities management suite.

INVEST IN FIFE

Businesses can connect to the proposed Glenrothes Energy Network which will deliver heat from RWE's combined heat and power (CHP) plant to a range of buildings in Glenrothes town centre via an underground network of pipes.
